IT STARTS WITH A DREAM

When you close your eyes, you can see it. Your dream barn. The perfect sanctuary, meticulously designed for you and your horses. You are comfortably surrounded by enduring strength and beauty. Exceptional craftsmanship serves to keep you and your loved ones safe.

The serene environment you have in mind is more than a dream. It is an attainable goal. Bring your vision to life. We are here to help you see the way forward.

PROTECT WHAT MATTERS MOST

VIRTUALLY LIMITLESS

Classic stalls, windows, doors, and accessories are the pinnacle of safety and functionality. Our design consultants, engineers and skilled craftsmen are ready to help you with what you need to make your dream barn a reality.

CLASSIC STALLS PROVIDE UNSURPASSED SAFETY

We are proud to support the equestrian lifestyle at all levels across North America, from private barns to the largest elite riding facilities. Our expertise, dedication, and craftsmanship has earned the trust of riders, trainers, veterinarians, and horses for more than 30 years.

We design, engineer, and manufacture every component with meticulous attention to detail, ensuring safety—with long-lasting beauty, functionality, and reliability.

SUPERIOR MATERIALS

We begin with heavy-duty 14-gauge pre-galvanized steel, made right here in the U.S. Galvanization helps reduce corrosion. Our manufacturing techniques maximize the efficacy of corrosion resistance. State-of-the-art powder-coat paint protection systems provide a super-durable, non-toxic finish.

OPTIMIZED FOR SAFETY

To protect your loved ones, Classic stalls are designed and built for safety. Narrow spacing between 1" steel bars prevents hooves from getting caught. There are no rough surfaces or sharp edges. All touchpoints are smooth. Our hinges, latches, and hardware provide security and safety, with easy and reliable operation.

STRUCTURAL INTEGRITY

Classic stalls are fully welded for maximum strength and durability, solidly backed by a 5-year structural warranty. Full-frame stall structure eliminates the bending, warping, and twisting typically found in lesser quality stalls. Stall solutions from Classic are custom fabricated to fit the dimensions, design, and flow of your barn.

OUR PROMISE OF QUALITY, INTEGRITY, AND SAFETY

Our 120,000 square-foot design and manufacturing facility is located in the heart of the Ozarks, an area known for tradition and craftsmanship. We are committed to providing the highest quality equine equipment in the industry. Embodying the timeless artistry that defines us, each steel component is crafted with care and our passion for safety.

SUPERIOR CRAFTSMANSHIP

Craftsmanship starts with our dedicated team of designers, engineers, and fabricators. Fueled by decades of experience, they strive to maintain the high standard of excellence we set for ourselves back in 1991.

SKILLED ARTISANS

Our fabrication processes are a combination of skill and innovation. State-of-the-art equipment, including precision laser cutters, ensures accuracy in the assembly of every component. But it's the human touch that truly sets us apart. Our craftsmen pour their hearts into every weld, and every detail, knowing safety for people and horses is paramount.

ENDURING FINISHES

Quality isn't just about what you see, it's about what you feel. That's why we take pride in our powder coat finishing processes, providing unmatched durability and protection against the elements. The result? Horse stall and barn equipment that stand the test of time. Your investment will look and perform its best for years to come.

WHITE-GLOVE CARE

When it comes to delivering your premium horse stalls, we don't cut corners. Our shipping department treats your stall system with the same care and attention that went into its creation. Each and every component is carefully packed so they arrive at your barn in prime condition, ready to install.

EMPLOYEE-OWNED, QUALITY-DRIVEN

Our commitment to quality and safety runs deep within our company culture. As employee-owners, we take immense pride in what we do. Every member of our team, from design and engineering to fabrication, is dedicated to protecting what matters most.

BEFORE YOU BEGIN

Protect what matters most. The following questions will help you decide what is best for your horses and ensure alignment with your barn and your personal preferences.

HOW TO MAKE THE RIGHT CHOICES

DESIGN FOR YOUR HORSES

- **?**) What personality types are your horses?
- ?) Is your barn for public boarding or private? Is it a breeding barn?
- ?) Do you have specific safety concerns or distinct needs?
- ? Are there opportunities to increase natural light in the barn?
- What can be done to improve ventilation into the barn and stalls?
- Should you consider adding a yoke to the windows?

CUSTOMIZE FOR YOUR BARN

- What type of building clear span or post and beam?
- **?** Do you have a poured concrete foundation?
- What are the dimensions of your barn, stalls, and aisle width?
- Opening left or right?
- (?) Which direction should the doors and windows open?
- ? Are there obstructions in the way of door swings or sliders?
- How wide and tall are the openings for doors and windows?

ALIGN WITH YOUR PREFERENCES

- ? Do you have a particular style in mind or any custom needs?
- ? Do you want the stall door left, right, or centered? Opening left or right?
- ? How do you plan to feed and water your horses?
- ? Do you prefer cross-buck or a contemporary styling for doors and shutters?
- (?) Would you like wood fill top and bottom or glass top door designs?
- ? Do you have specific colors and design styles to match in your barn?

CONNECT WITH A DESIGN CONSULTANT

Your dream barn is an attainable goal. Whether you are building from the ground up or renovating an existing barn, our design team can help bring your dream barn to life.

HOW TO GET STARTED

OUR PROVEN PROCESS TO REALIZING YOUR DREAM

By fully understanding your unique environment first, we ensure your stalls will safely serve the needs of your horses, fit the design of your barn, and match your personal style. We can help you select the right barn doors and windows to bring safety, security, light, and ventilation to your barn. And to complete the picture, we can also assist you with stall flooring, aisle-way pavers, and accessories.

Our process ensures you feel supported throughout the entire experience, from planning through final build. Here's what you can expect.

STEP 1 PLAN

Think about the kind of barn you want. Ask your friends and equine experts for their experiences and insights. To define your vision for your dream barn, review Classic images of barns and stalls and identify those you like. Find a contractor you trust to bring your dream barn to life.

STEP 2 REFINE

Move from concept to reality. Have your contractor/architect create a floor plan of your barn and develop timelines and budgets. Classic design consultants will work with you to understand your unique needs and design custom stall solutions that fit your horses, your barn, and your style and you will receive a finalized quote for the items requested.

STEP 3 FINALIZE

See what your barn will look like. With your approval, your Classic design consultant will generate computer renderings to show how your equipment will come together. We will then coordinate with you and your contractor to confirm final measurements. Once deposit and approved drawings are received, we will then procure materials and schedule production.

STEP 4 REALIZE

Your dream barn is coming together. With construction of your personalized equipment underway, our goal is simple: We will see your project through to completion, which includes carefully packaging and shipping your equipment directly to your job site upon receipt of authorization and final payment.

ENDURING SAFETY FOR HIGHLY ACTIVE BARNS

Sliding-door stalls are ideal for busy facilities where multiple horses are frequently coming and going. The space-saving and smooth-operating design helps keep aisles clear and is a great option for barns with narrow aisles.

Maintenance-free door glides ensure decades of smooth operation

Flip-lock latch design keeps your horse safe and secure

AISLEWAY FLOORING

TRU-STEP® PAVERS PROVIDE COMFORT AND SAFETY

Tru-Step® Interlocking Rubber Pavers create a nonslip barn surface in wet or dry conditions. Our rubber pavers can be used for aisle flooring, walkways, grooming stall flooring...virtually anywhere you need a safe surface for you and your horse. In addition to safety, they add a decorative flair that is easy to maintain.

NONSLIP FLOORING WITH LASTING BEAUTY

True-Step pavers are available in three popular colors: black, grey, and terracotta red. You can mix and match them in and around your barn to add breathtaking beauty. The interlocking "dog-bone" shape provides an attractive pattern while holding them securely in place.

We offer Tru-Step pavers in two different thicknesses. For existing concrete barn aisles, 3/4" thick pavers can be applied with adhesive, transforming your barn aisle into an attractive and safe footing for you and horses. To eliminate the additional cost of a full concrete pour, 11/2" thick pavers can be installed directly on compacted base material. When installed properly, these pavers have an extremely long life expectancy.

KEEP YOUR BARN BEAUTIFUL

Prestigious venues across North America choose our pavers because they will not fade in UV light, and they withstand harsh freezing and thawing conditions. Other brands may crumble or crack in extreme weather conditions. Our 100% recycled rubber pieces are shredded, interwoven and chemically bonded together. This process results in a sturdy bond that ensures long-lasting durability. Tru-Step pavers are durable enough to drive cars and tractors on.

Clean-up is easy with Tru-Step pavers. You can use a broom, leaf blower, vacuum or even a pressure washer—a testament to their enduring strength.

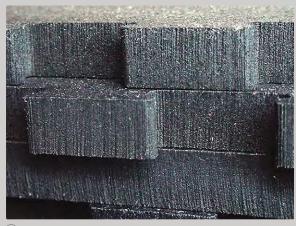

STALLS MATS

A Custom fit aisleway mats solution

B Heavy-duty interlocking lugs

© Easy-to-install layouts

INTERLOCKING SOLUTIONS FOR STALLS AND AISLES

Are you tired of hauling stall mats out to clean up the mess underneath?

Loktuff interlocking mats provide a perfect solution. Backed by warranty, they are designed to minimize any concerns with buckling or curling. They lock together to prevent bedding from lodging underneath. Available in 3/4" thickness for stalls, and 1/2" thickness with a color speck for barn aisles.

Loktuff mats provide horse comfort, reduce horse injuries, reduce bedding cost, and increase traction. They are non-absorbent, insulate against cold and damp conditions, and are flat on the bottom which minimizes bacteria growth.

The interlocking design minimizes curling or buckling, preventing the trip hazard typically created by non-interlocking mats. Made from vulcanized rubber, they will not change shape under pressure. Waterjet-cut-edges ensure a tight fit every time. The most popular size is 4' by 6', but custom configurations are available.

(D) Interlocking sections make up the overall kit

STALL MATTRESSES

DESIGNED FOR COMFORT AND CONVENIENCE

StableComfort is a wall-to-wall waterproof stall mattress system. This resilient yet forgiving surface closely mimics the feel of natural pasture. Horses stabled on this mattress system are more likely to lie-down. Hock sores are greatly reduced. Its one-piece top cover makes stall cleaning a breeze.

Not only is it ergonomic, efficient and economical, but it's also environmentally friendly as it significantly reduces the amount of shavings waste.

Multi-celled mattresses filled with uniform rubber crumbs for comfort and shock absorbency create the comfortable underlayment. The one-piece top cover is an industrial-strength geotextile, permeated with a vulcanized rubber compound, giving it indestructible durability.

(E) Multi-celled mattress and one-piece top cover

© StableComfort mattress stall flooring allows for reduced bedding usage for all applications

EASY TO INSTALL

Installation begins by placing 4-foot by 6-foot crumb-filled mattresses in the stall. Extra crumb is placed on top of the mattresses to fill any gaps. The one-piece top cover is fastened to the stall walls using plastic fastening strips and screws. This ensures that no bedding or waste gets underneath the stall mat system.

With the comfort provided by the mattress system, shavings need only be used for absorption of urine. Muck-out time is greatly reduced and when you factor in the savings in bedding costs, this product will actually pay for itself.

G Cutaway shows the multi-layered comfort system

STABLE-ITY GRID

(A) Great option for around the field water station

B Eliminates problem areas

© Provides a good stable base for paddock areas

PERMANENT MUD MANAGEMENT SOLUTION

Providing excellent drainage, Stable-ity Grid is an interlocking system that helps prevent accumulation of mud throughout the farm. Stable-ity Grid can be used to stabilize the ground inside or outside of barns. The most common uses for the grid system are exterior applications, typically in high traffic areas prone to mud, such as stall paddocks, gate openings, sacrifice turnouts, run-in sheds, and water troughs.

When used in the stall, Stable-ity Grid prevents your horse from digging, ensuring a permanently level surface, making stall cleaning easier and helping to control odor.

MAINTENANCE-FREE, WITHSTANDS HEAVY LOADS

Designed to eliminate the need for constant gravel replacement, Stable-ity Grid offers a durable and effective way to maintain level, mud-free surfaces. Simply place the 24" square interlocking grids over a level rock base and backfill with fines (coarse or angular sand, bluestone, etc.) or road cloth for optimal results.
